Strengthen your cybersecurity capabilities

Unisys Security Transformation

Highlights

Global cybersecurity experts for audits, assessment and consulting

Governance, risk management and compliance expertise

Cybersecurity service management

Vulnerability and patch management

Threat intelligence

Incident management

Proactive approach to security

Protecting sensitive data is a business imperative. But myriad government regulations, the constant evolution of threats and the global cybersecurity talent shortage complicate organizations' efforts. Organizations need end-to-end security that can keep them compliant and protected.

With the Unisys Security Transformation solution, you can strengthen your cybersecurity to better protect your infrastructure, applications and data. Ensure your critical assets are well protected, maintained and compliant.

Benefit from a comprehensive 360-degree joint responsibility model to govern and protect your infrastructure and integrate the various security protection capabilities with your business services (see figure). Navigate the intricacies of cybersecurity with ease as you advance your digital transformation, transition to the cloud, fortify your supply chain and adapt to growth in remote and hybrid workers.

Flexible deployments

Completely outsource your cybersecurity to Unisys' team of experts and architects or extend the capabilities of your chief information security officer team.

Why Unisys?

Unisys has a proven track record of providing secure solutions for highly regulated private and public sector organizations. By focusing on agile implementation methodologies, Unisys can quickly and accurately implement these controls to reduce your exposure to risk.

With Unisys, cybersecurity is a priority, and every engagement includes integrated security. Unisys deploys and validates each Unisys cyber solution internally, ensuring clients benefit from real-world testing, attack scenarios and risk mitigation. Count on expert, vendor-neutral management guidance and rapid cybersecurity improvements. Unisys can help you embed a security-aware culture in everything you do.

To explore how Unisys Security Transformation can secure your infrastructure, people and data, visit us online or contact us today.

How you benefit

- **Stronger cybersecurity posture**: Gain the confidence to navigate the evolving regulatory compliance landscape and increasingly sophisticated cyber attacks. The solution enables you to deliver continuous security, secure digital transformation, effective compliance and audit support, and cost control to the business.

- **Enhanced productivity:** Tap Unisys' global expertise to fortify your organization against cybersecurity challenges, regardless of the size of your cybersecurity team. Reduce the burden of managing in-house tasks and systems and free up these team members for other initiatives.

- **Integrated technology approach:** Enjoy a solution that integrates your cybersecurity tools and regular digital systems and services – a critical success factor. And when technologies change, you'll stay ahead of the latest cybersecurity challenges. Unisys experts immerse themselves in the fast-paced, complex landscape of integrated security and AI platforms and services. This includes embedded innovation support and thought leadership and trusted advisor services for your CISO.

Proactive security approach

Replace an ad hoc, reactive approach to security with a strategic, proactive plan that emphasizes data protection, threat intelligence and incident prevention.
